

Video service for Teams

Information for teams about video service provided by the organizers.
This service is free of charge for all teams.
It will be possible to test the video on Thursday 19 June at 17:30 (12 forerunners)

What you will need for watching or recording video of competitors

You will receive two cables with female cinch connector (Fig. 1). In each cable will be the whole run of the competitor also with his time. Competitor's run will be cut from 4 professional cameras. The cuts will always be done at the same place, so the video will be good for competitors' comparison. Two cables are needed in the heats in case of the 1 min. starting interval. In the first cable you will have competitors with even numbers and in the second with odd numbers. It would not be necessary to switch between recorded parts of the course, only between the two cables that you will receive. To switch between cables for watching or recording is best to use video switch. Video signal is in European PAL norm.

Fig. 1

For record the video from each cable you have more solutions.

1. If you want to record on video recorder, you will have to have two of them, and also two cables with male cinch connector (Fig. 2).

Fig. 2

2. It's also possible to record with video camcorders, for this you will need two camcorders with "AV In" (Fig. 4) slot and two cables "jack/cinch". (Fig. 3)
